# 0-1: Build the first pipeline to extract, integrate, and visualize existing channel logs

*Pull, unify, and standardize multi-source channel data in one place.*

**1**

## Discovery & Alignment

*Stakeholder & Scope Framing*

- Assess marketing squad dynamics, taxonomies, and core needs.
- Align on client expectations and success criteria.
- Evaluate available data sources and tooling options.

**2**

## Enablement & Design

*Access & Prototyping*

- Partner with client infrastructure teams to secure data access and permissions.
- Delivery 1: Initial dashboard mockups for functional approval.

**3**

## Execution & Integration

*Pipeline & MVP Build*

- Delivery 2: Connect pipelines to execute real data collection and integration.

**4**

## Optimization

*Value Realization & Iteration*

- Delivery 3: Drive continuous platform improvements based on client feedback loops.

**Stakeholders:** Marketing squad (3), client's operations squad (devops and director)

# 0-to-1: Build solo MVP pipeline and dashboards from a PoC to deliver early P&T cost-service insights

*Implement data pipeline based on TBM framework.*

1

## Discovery & Pipeline Foundations

*PoC Ingestion & Core Logic*

- Analyze vendor PoC logic and business requirements with the TBM expert and Sponsor.
- Build initial Python pipeline to ingest, transform, and store raw financial data in the database.
- Replicate baseline PoC metrics into early dashboard views.

2

## Enablement & MVP Design

*Model Architecture & Initial Rollout*

- Architect and implement the custom TBM data model from scratch.
- Launch initial strategic dashboards to validate cost-service visibility with leadership.

3

## Scale & Squad Transition

*Engineering Scale & Handover*

- Establish a continuous development cycle with business partners focused on data quality.
- Onboard and lead a squad of up to 4 Data Engineers to automate data pipelines.

4

## Optimization & Refinement

*Continuous Development & Modernization*

- Execute technical optimizations: migrate to serverless architecture, automate pipelines, and enhance performance.
- Take over ownership of the external vendor's service (Tableau) due to company strategic shift, and transition operational pipeline management to the newly onboarded internal squad.

# 0-to-1: Establish the global operating and cost model for Tableau Server while centralizing service support and triage.

*Transform day-to-day support into an automated, self-service platform by engineering workflows that reduce manual workload and increase customer satisfaction.*

1

## Discovery & Service Setup

*Handover & Service Model Definition*

- Lead vendor handover and establish the global operating and cost model for Tableau Server.
- Act as liaison between Senior Management, Salesforce, and Procurement to manage licensing, invoices, and product scope.

2

## Enablement & Service Operations

*Triage & Support Foundations*

- Serve as single point of contact (SPOC) for technical troubleshooting, incident triage, and day-to-day resolution.
- Gather and analyze feedback across stakeholders to identify service bottlenecks.

3

## Optimization & Lifecycle Management

*Technical Upgrades & Platform Delivery*

- Drive platform upgrades, server migrations, and system reliability efforts in parallel with operational support.
- Identify business needs and translate them into technical specs, user stories, and acceptance criteria to partner with ITSM, DevOps, and Data Engineers for execution.

4

## Automation & Self-Service

*Manual Support Reduction & Workflow Automation*

Identify, design, and test:

- Access Control automation, reducing manual tickets by 70% (~30 tickets/week).
- License Control automation to manage user inactivity and reduce its impact on service cost.
- Google Group sync automation for bulk user provisioning and self-service group assignment.

# My Biggest Product Case Study

I am my biggest product case study since I decided to pursue Computer Science as a career and then moving abroad 3 times in pursuit of growth, stability, and autonomy. Powering through those transitions is what gives me the confidence that I can figure things out and deliver, while being collaborative.

I am capable of creating meaningful professional connections by bringing that same authentic human element to work. For me, stakeholder management isn't just about status updates, it's also about building genuine trust through radical transparency, clear accountability, and commitment to delivering results (making progress).

## MY HIRING PROCESS EXPERIENCE

3

### DirecTV

Venezuela · 3 phases

*incl. psychological & medical check-ups*

2

### TCS

Uruguay · 2 phases

2

### Globant

Uruguay · 2 phases

4

### Adevinta

Spain · 4 phases

role terminated post-Blackstone acquisition:

I was mainly focused on a global product (Tableau Server) and since 2024 the company strategy shifted to go local, so throughout last year each marketplace (country) was taking ownership of their own content in Tableau Cloud, aka no global capability needed afterwards.
