0-1: Build the first pipeline to extract, integrate, and visualize existing channel logs

Pull, unify, and standardize multi-source channel data in one place.

1. Discovery & Alignment — *Stakeholder & Scope Framing*

- Assess squad dynamics & core needs
- Align on expectations & success criteria
- Evaluate data sources & tooling

2. Enablement & Design — *Access & Prototyping*

- Secure data access & permissions
- Delivery 1: dashboard mockups approved

3. Execution & Integration — *Pipeline & MVP Build*

- Delivery 2: pipelines live, real data flowing

4. Optimization — *Value Realization & Iteration*

- Delivery 3: continuous improvements from feedback

👥 **Stakeholders:** marketing squad (3), client's operations squad (devops and director)

0-to-1: Build solo MVP pipeline and dashboards from a PoC to deliver early P&T cost-service insights

Implement data pipeline based on TBM framework.

1. Discovery & Pipeline Foundations — *PoC Ingestion & Core Logic*

- Analyzed PoC logic with TBM expert & Sponsor
- Built initial Python ingestion pipeline
- Replicated baseline metrics in early dashboards

2. Enablement & MVP Design — *Model Architecture & Initial Rollout*

- Architected custom TBM data model from scratch
- Launched strategic dashboards for leadership

3. Scale & Squad Transition — *Engineering Scale & Handover*

- Established continuous dev cycle for data quality
- Onboarded & led a squad of up to 4 Data Engineers

4. Optimization & Refinement — *Continuous Development & Modernization*

- Migrated to serverless, automated pipelines
- Took over vendor's Tableau service, transitioned ownership

 **Stakeholders:** CIO Office (Sponsor), TBM Expert (Vendor), P&T Service Owners, Senior Managers, and Engineering Managers.

0-to-1: Establish the global operating and cost model for Tableau Server while centralizing service support and triage

Transform day-to-day support into an automated, self-service platform that reduces manual workload and increases customer satisfaction.

1. Discovery & Service Setup — *Handover & Service Model Definition*

- Led vendor handover; set global cost model
- Liaised with Senior Mgmt, Salesforce & Procurement

2. Enablement & Service Operations — *Triage & Support Foundations*

- SPOC for troubleshooting & incident triage
- Gathered feedback to identify bottlenecks

3. Optimization & Lifecycle Mgmt — *Technical Upgrades & Platform Delivery*

- Drove upgrades, migrations & reliability work
- Translated needs into specs for ITSM/DevOps/DE

4. Automation & Self-Service — *Manual Support Reduction*

- Access Control automation: –70% tickets (~30/wk)
- License Control automation for inactive users
- Google Group sync for self-service provisioning

👥 **Stakeholders:** Senior Management, Users and Data Leads from 5 EU Marketplaces (Spain, France, Italy, Germany, Benelux), Procurement, ITSM, DevOps, Data Engineers.

My Biggest Product Case Study

I am my biggest product case study since I decided to pursue Computer Science as a career and then moving abroad 3 times in pursuit of growth, stability, and autonomy. Powering through those transitions is what gives me the confidence that I can figure things out and deliver, while being collaborative.

I am capable of creating meaningful professional connections by bringing that same authentic human element to work. For me, stakeholder management isn't just about status updates, it's also about building genuine trust through radical transparency, clear accountability, and commitment to delivering results (making progress) 🤝

👛 My hiring process experience

Company	Location	Phases
DirecTV	Venezuela	4 phases, incl. psychological & medical check-ups
TCS	Uruguay	2 phases
Globant	Uruguay	3 phases
Adevinta*	Spain	5 phases

- role terminated post-Blackstone acquisition:

I was mainly focused on a global product (Tableau Server) and since 2024 the company strategy shifted to go local, so throughout 2025 each marketplace (country) was taking ownership of their own content in Tableau Cloud, aka no global capability needed afterwards.
